

Ajay Dhiman

Flutter & Android Developer | 5.5+ Years of Experience

+918684838182 | dhiman221195@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Flutter and Android Developer with 5.5+ years of experience building and shipping cross-platform mobile applications across fintech, telecom, logistics, and healthcare. At Digi Mantra Labs, reduced data processing latency by 30% via BLoC state management and delivered real-time trading features for a US stock market app using GraphQL and Socket.IO.

CORE SKILLS

Mobile Development: Flutter, Dart, Android SDK, Kotlin, Java

State Management: BLoC, GetX, Provider, setState

Architecture: Clean Architecture, MVVM, MVC

API Integration: REST APIs, GraphQL, Socket.IO, Retrofit, JSON Parsing

UI/UX: Material Design, Responsive Layouts, Custom Animations, Jetpack Components

Testing & Debugging: Unit Testing, Widget Testing, Bug Fixing, Performance Optimization

Version Control & Collaboration: Git, GitHub, Jira, Agile/Scrum, Code Reviews

CI/CD & DevOps: GitHub Actions, SDLC, Build Automation, App Store/Play Store Deployment

Cloud & Backend Services: Firebase Auth, Firestore, Cloud Messaging, Remote Config, Google Maps API, Stripe, Razorpay

Local Data & Architecture: SQLite, Dependency Injection, Secure Storage

AI & AI-Assisted Development: AI-powered applications, Prompt Engineering, AI Workflow Automation, ChatGPT, Claude, Cursor, GitHub Copilot

Tools: Android Studio, VS Code, Xcode, Postman, Firebase Console, Figma, Google Play Console, App Store Connect

EXPERIENCE

Flutter & Android Developer

Nov 2023 - Present

Digi Mantra Labs

Mohali, India

- Spearheaded **end-to-end cross-platform development** in Flutter and Dart, delivering fintech and telecom apps serving thousands of active users.
- Architected **real-time financial features** for a US stock market investment app using **GraphQL and Socket.IO**, achieving sub-second data latency for live trading decisions.
- Adopted **BLoC state management**, reducing data processing latency by ~30% and improving UI transition smoothness for a more responsive user experience.
- Applied **SQLite for local data persistence**, dependency injection for scalable architecture, and secure storage to protect sensitive user data such as auth tokens.
- Established **GitHub Actions CI/CD pipelines** automating unit tests, APK/IPA builds, lint analysis, and **Play Store/App Store deployment**.
- Integrated **REST APIs, Firebase Authentication, Firestore, and push notifications**, enabling reliable login and real-time data access while reducing authentication-related support issues.
- Led **code reviews** and mentored junior developers on Flutter best practices and **clean architecture**, raising overall code quality across the team.
- Shipped features within **Agile/Scrum sprints**, participating in planning, stand-ups, and retrospectives to maintain a consistent release cadence.

Technologies Used: Flutter, Dart, BLoC, GraphQL, Socket.IO, REST APIs, Firebase Authentication, Firestore, Push Notifications, SQLite, Dependency Injection, Secure Storage, GitHub Actions

Flutter & Android Developer

Feb 2022 - Oct 2023

Appentus Technologies Pvt. Ltd.

Jaipur, India

- Built logistics and last-mile delivery apps in **Flutter with GetX state management**, supporting real-time shipment tracking for thousands of users.
- Integrated **Google Maps API** for live driver tracking, route optimization, and geofencing, significantly improving delivery efficiency for carriers and shippers.
- Refactored legacy code through **performance optimization**, improving app stability by 30% and reducing crash rates to minimize user-facing disruptions.
- Launched digital invoicing, **push notifications**, and real-time order-status updates via full deployment on [Google Play Store](#) and Apple [App Store](#), boosting user engagement.

Technologies Used: Flutter, Dart, GetX, Google Maps API, Push Notifications

- Developed **native Android apps in Kotlin and Java** using MVVM architecture for a healthcare telemedicine platform, ensuring maintainability and scalability.
- Engineered **real-time video/audio consultation features** using WebRTC SDKs, enabling seamless doctor-patient interactions for remote healthcare delivery.
- Configured **GitHub Actions workflows** to automate PR testing, builds, and store deployment for the telemedicine platform, reducing manual release overhead.
- Leveraged **Jetpack Components (LiveData, ViewModel, Room)** and Retrofit for networking and local data caching, improving responsiveness and **offline reliability**.
- Strengthened **secure authentication, session management, and role-based access control**, safeguarding patient data and meeting healthcare compliance requirements.

Technologies Used: Kotlin, Java, MVVM, WebRTC, GitHub Actions, Jetpack Components, LiveData, ViewModel, Room, Retrofit

KEY PROJECT PORTFOLIO

EarthLink

- Delivered a **subscription management platform** for a US ISP covering Fiber, 5G, and Satellite plans with complex account workflows.
- Optimized state management with **GetX**, supporting enterprise plan upgrades up to **5 Gbps** across multi-tier account flows.
- Configured **GitHub Actions CI/CD pipelines** for automated builds and consistent release quality across both app stores.
- Available on [Google Play](#) | [App Store](#)

Magnifi

- Engineered an **AI-powered investment co-pilot** for the US stock market, delivering real-time analytics and portfolio insights via Flutter.
- Built **real-time stock data feeds** using Socket.IO with BLoC state orchestration, ensuring accurate live market updates.
- Automated **testing, build, and release workflows** via GitHub Actions, streamlining PR validation and App Store/Play Store deployment.
- Secured the app with **JWT-based authentication** and robust transactional features tailored for a financial-grade mobile application.
- Published on [Google Play](#) | [App Store](#)

Mobile Petrol Station (Pilot & Customer)

- Developed a **two-sided fuel delivery ecosystem** with dedicated Pilot and Customer apps using Flutter and BLoC-driven state management.
- Integrated **turn-by-turn navigation and route optimization** across multiple vehicle types for real-time order tracking and delivery sync.
- Available on [Google Play](#) | [App Store](#)

Ph7 Doctor & User Suite

- Built a **telemedicine platform** in Flutter featuring real-time video/audio consultations, appointment booking, and patient records.
- Enforced **secure patient data handling** and robust authentication flows compliant with healthcare application standards.
- Established **GitHub Actions CI/CD** for automated testing and store deployment, ensuring reliable healthcare app releases.
- Available on [Google Play](#)

Courier-Market

- Architected a **carrier/shipper bidding marketplace** with live shipment tracking and automated invoicing using clean MVVM architecture.
- Available on [Google Play](#) | [App Store](#)

RealEnglish

- Developed an **educational language-learning platform** in Flutter with interactive modules designed to engage and advance learners.
- Available on [Google Play](#) | [App Store](#)

KEY ACHIEVEMENTS

- Reduced data processing latency by ~30% via BLoC-based state management optimization (Digi Mantra Labs).
- Improved app stability by 30% through systematic bug resolution and refactoring (Appentus Technologies).
- Shipped 10+ applications to Google Play Store and Apple App Store across six industry domains.
- Delivered real-time financial applications using GraphQL and Socket.IO for responsive market data and portfolio updates.

EDUCATION

Post Graduate Program in Java (PGP Java)

NIIT Limited | Connaught Place, New Delhi

B.Sc. Computer Science

Maharshi Dayanand University (MDU) | Rohtak, Haryana
